1. Setting Up The EuroScope

For this sectorfile, we are going to use EuroScope beta version 3.2.3

Steps:

- Delete the EuroScope if you have different version.
- Go into https://www.euroscope.hu/ and click on "Download EuroScope"
- Install the EuroScope.
- Open the .msi setup, select everything into the EuroScope main folder on "C:\Program Files (x86)\EuroScope". Replace all the files if asked.

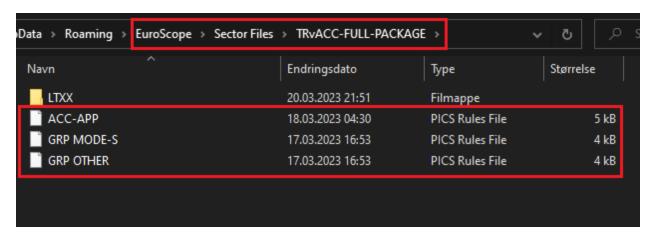

a. Download and Install the Sector File

You can download the latest sector file on vats.im/tr/sector.

- Download "TRVACC-FULL-PACKAGE"
- Go into AppData\Roaming\EuroScope and create new folder inside and name it "Sector Files". This is for making documents folder more organized.
- Create another folder into "Sector Files" and name it "TRVACC-Full-Package"
- Copy all the content in the zip folder that you download at the first step.

b. Opening for the First Time

When you open the EuroScope, it will open a window and waiting for you to select the correct "profile". We are going to give detailed information about the "Profiles". So at the first step select the profile you want to use.

c. First Step After Choosing the Profile

After you select the correct profile, make sure to untick "Auto load last profile on startup" and "Auto save profile on exit" in the OTHER SET section.

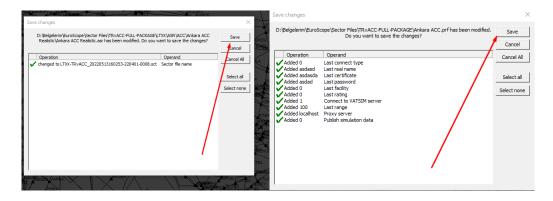

The reason for this is we have multiple profiles for multiple sectors, so in order to select every time on startup you need to untick these.

d. Closing the EuroScope

When you close the EuroScope, program will ask you to save the things you have changed in the profile. You can save several info's in it, such as;

- Connect info's (VATSIMCID, password, ATC Rating, Last Callsign)
- ATIS Line Info
- Last sweatbox file
- Sector file name

I recommend you to save this information's in order to connect easily on the next time.

2. Profiles

Profiles of new sector file separated into 3 main sectors.

- ACC-APP (CENTRE/APPROACH)
- GRP MODE-S (Airports with MODE-S)
- OTHER (ALL OTHER AIRPORT WITHOUT MODE-S)

a. ACC-APP

Center and Approach use the same profile so it should be easier to control. If you zoom out, you will only see the airports with ICAO codes but if you zoom closer the STAR's will appear. If you zoom more into the airport, you will see the airport. This profile is including all the airport in Turkish Airspace. To make it easier, we have also added (F1+x) So if you press (F1+ and a number from 2 to 9) then you will see different airports. If you want to return to normal, then you press (F1+1). Under is a list where you can see which airports contains which number.

F1+2: LTFM

F1+3: LTFJ

F1+4: LTAI

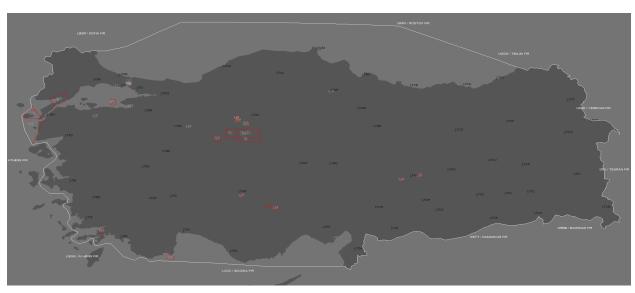

F1+5: LTAC

F1+6: LTBJ

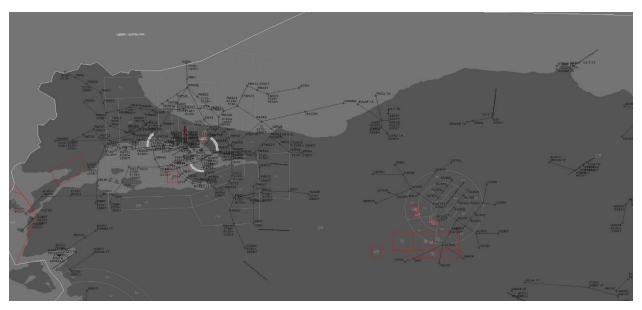

F1+7: LTFE

F1+8: LTBS

F1+9: LTCG

b. GRP MODE-S

MODE-S is a plugin based on IRL. Simply explained you won't be able to see the aircraft unless they squawk mode C. Don't forget to ask them to squawk C before they push back! MODE-S is added to 4 airports (LTFM, LTFJ, LTAI, LTAC). To make it easier, we have also added (F1+x) So if you press (F1+ and a number from 1 to 8) then you will see different airports. Under is a list where you can see which airports contains which number to see them.

F1+1: LTFM TWR

F1+2: LTFM GND DEL

F1+3: LTFJ TWR

F1+4: LTFJ GND DEL

F1+5: LTAI TWR

F1+6: LTAI GND DEL

F1+7: LTAC TWR

F1+8: LTAC GND DEL

c. OTHER

OTHER profile has some other important airport in Turkish airspace which including (LTBJ, LTBS, LTCG, LTFE, LTFH). To see all other airport like (LTBH, LTAF, LTDA, LTAU) etc... use ACC-APP profile and zoom in to the airport you want to control. OTHER profile it's not have MODE-S feature. So that's means aircrafts on ground is not needed to set

squawk mode C to see the aircraft. we have also added (F1+x) So if you press (F1+ and a number from 1 to 5) then you will see different airports. Under is a list where you can see which airports contains which number to see them.

F1+1: LTBJ GRP

F1+2: LTBS GRP

F1+3: LTCG GRP

F1+4: LTFE GRP

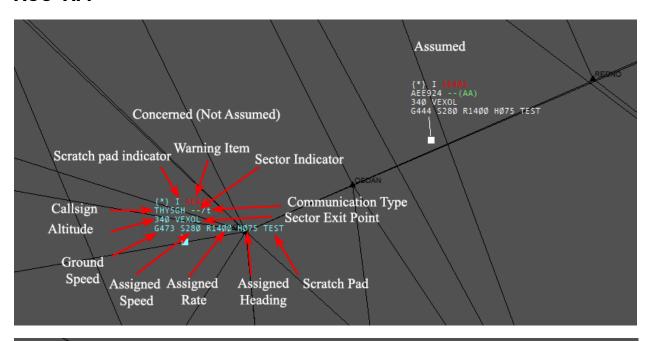

F1+5: LTFH GRP

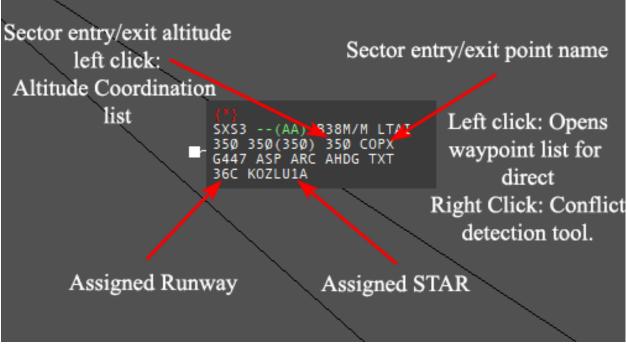

3. Tags

In the new Sector file tags and definitions are a little bit different. In order get used to it easily, you need to read this section really carefully.

ACC-APP

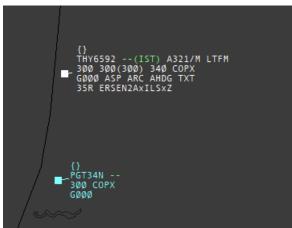

Standard Approach Tags

{} THY7MH --(AI) A321/M LTAI 280 350(280) 350 COPX G000 ASP ARC AHDG TXT 36C FG711

Yesilkoy Approach Tags

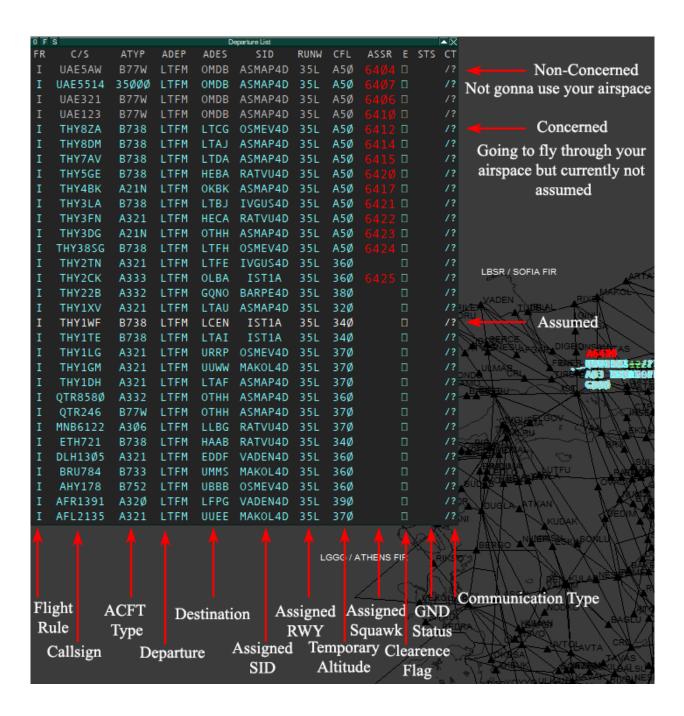

BATNU

4. Advanced Lists

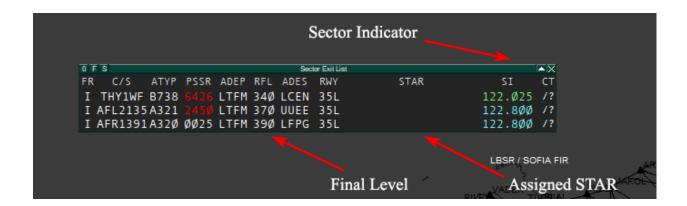

Advanced lists also changed such as; Sector exit list, Departure List etc.

a. Departure List

b. Sector Exit List

7. Connect to CPDLC on Ground

You can use CPDLC via Hoppie on all profile. You can get detailed information from https://github.com/pierr3/vSMR/wiki/CPDLC-Clearance-system

You can connect via CPDLC on LTFM and LTAI only. Other airports don't have datalink system. Logon Callsigns are same with ICAO's.

NOTE: With AIRAC 2205 update CPDLC will be mandatory to use on LTFM and LTAI.

Order to use of CPDLC.

1st – Delivery

 2^{nd} – Ground

3rd – Tower
